

Good morning,

You are invited to participate in a research study on how to prevent the spread of rabbit hemorrhagic disease (RHDV2) in the United States. RHDV2 threatens both wild and domestic rabbits. Researchers at the University of Georgia, **in cooperation with the North Carolina Wildlife Resources Commission**, are conducting surveys of key stakeholder groups who could have interactions with rabbits to understand their opinions on how this disease should be managed.

We are contacting you to participate in this study because hunters and falconers are important stakeholders in the management of wildlife disease. **Regardless of what you currently hunt for, your answers and perspectives about rabbit and RHDV2 management are important to us.**

Please take 10-15 minutes to complete this survey:

[Take the Survey](#)

Your answers are completely confidential. If you have any questions about the study, please contact either Dr. Elizabeth Pienaar at elizabeth.pienaar@uga.edu or Hannah Shapiro at hannah.shapiro@uga.edu.
